

# Pocket Vessel Anastomosis Trainer

Bringing  
Practice to the  
Practice of  
Medicine<sup>®</sup>

**Trainer includes vessel clips,  
and one each of the following:**  
3mm and 4mm graft vessel,  
3mm and 4mm target vessel.  
**Product #1389**

**Developed in conjunction with the Thoracic Surgery Directors Association (TSDA), the Pocket Vessel Anastomosis Trainer provides surgical learners with a platform for deliberate practice of anastomotic skills in a safe, repeatable environment.** When not in use, this compact Trainer fits into the resident's lab coat pocket and can be used outside of the simulation lab environment.

The replacement graft and target vessels allow for multiple anastomoses. The clear cover can be used to create a more challenging distance or angle from the anastomosis or repair site to perfect needle and needle holder angles as well as suture placement.

Our Mitral Valve Prolapse Trainers, purchased separately, are compatible with the Pocket Vessel Anastomosis Trainer. Designed for valve repair training, the prolapsed posterior leaflet is reinforced to allow for incision, repair and annular ring placement.
